Professional Summary

AI and Data Science Specialist with 1+ year of hands-on experience architecting enterprise-scale ML/LLM systems on AWS and Azure. Proficient in statistical modeling, ML pipeline design, LLM integration, prompt engineering, and AI evaluation frameworks. Proven ability to design ground truth solutions and production-grade AI systems that scale while maintaining reasoning quality.

Technical Skills

- **Languages:** Python, C++, Java, JavaScript, Dart
- **Data Science & ML:** Statistical modeling, ML pipelines, Data analysis, AI systems, LLM integration
- **Databases & Data Engineering:** PostgreSQL, MongoDB, MySQL, Firebase, SQLite
- **Cloud & DevOps:** AWS, Azure, CI/CD, Git, GitHub, Evaluation Frameworks
- **AI Systems:** REST APIs, LLM Integration, Agentic Design, OAuth2, JWT, Prompt Engineering
- **Soft Skills:** Technical Communication, Statistical Reasoning, Problem Solving, Cross-functional Collaboration

Work Experience

Full Stack Developer, Tata Consultancy Services (TCS) April 2025 – Present

- Architected enterprise-scale ML/LLM systems on AWS and Azure implementing inference pipelines for conversational AI that scaled to 10,000+ concurrent users with 99.9% uptime, optimizing statistical reasoning latency across enterprise workloads.
- Engineered production-grade LLM-powered interfaces with real-time dynamic reasoning flows and evaluation frameworks for output correctness, increasing end-user engagement by 30% across 3 client deployments through improved response quality.
- Developed backend microservices using Java and Spring Boot for LLM orchestration and authentication, reducing inference latency by 25% through optimized ML pipeline design; collaborated with cross-functional teams to establish ground truth validation metrics and SLAs.
- Implemented agentic AI workflows into 3 enterprise systems via LLM integration and chain-of-thought prompt engineering, establishing reasoning evaluation frameworks that decreased manual validation workload by 40%.

Software Development Engineer, BlueMango Labs July 2024 – December 2024

- Automated iOS and Android build distribution using Fastlane scripts, shortening release cycle duration by 50% and eliminating manual handoffs for a 10-person QA team.
- Localized application content for 5 languages using Flutter internationalization framework, expanding the product's reach into 3 new international markets.
- Strengthened audio and video call reliability via LiveKit SDK, decreasing connection failure rates by 35% and improving average call quality scores by one tier.
- Delivered a live streaming pipeline with under 500ms end-to-end latency using LiveKit, supporting 1,000+ concurrent viewers without degradation under peak load.

Software Development Engineer Intern, BlueMango Labs January 2024 – June 2024

- Redesigned mobile interfaces for SuperAstro and Kosmic apps through 4 rounds of user research and A/B-tested prototypes, achieving a 25% gain in usability scores.
- Established REST API and message broker connections to the app data layer, raising system throughput capacity to handle a 2x spike in peak-hour traffic.
- Deployed Firebase Cloud Messaging push notifications, resulting in a 20% rise in daily active users within 30 days of launch.

Projects

Montra – Full-Stack Personal Finance Tracker (Flutter, Node.js, PostgreSQL) GitHub

- Shipped a cross-platform finance tracker with budget planning, multi-account support, and CSV analytics exports, reducing manual expense tracking time by an estimated 3 hours per week per user.
- Constructed a modular RESTful backend using Node.js, PostgreSQL, and Express.js with JWT authentication and role-based access control; achieved under 200ms average API response time.
- Configured SQLite for offline-first data persistence, business logic component (BLoC) state management pattern, and immutable models via code generation, covering 10+ expense categories with real-time dashboard updates.

Education

RGPV University – Bachelor of Engineering in Computer Science GPA: 8.7/10.0 June 2020 – May 2024
